

TECHNICAL ABILITY TEST

Business Case

Our client has a number of disparate systems (A Human Resource System and An Accounting System) with different user signing credentials. It is becoming increasingly difficult for users to keep track of their user accounts for the various systems.

A request has been made to have a centralized user account management database interfaced with an API.

You are required to design a master user account database interfaced by an API that will allow users to logon to the various applications they use with a single username and password.

Development Tools

- SQL Sever With Asp.Net MVC or .Net Core

Deadline to deliver results

- One week from the date of receipt of this communicate.

Presentation of results

- Final presentation to be done in-person at the Head Office of AXIS Pension. Date and time will be communicated.
